Work Experience

DataArt — Full-Stack Developer (11/2022 – Present)

Spearheading the technical evolution of a large-scale U.S.-based business travel management platform. Moving a critical architectural transition from Angular 1.5 to React 18 while maintaining high-availability backend services.

Stack: C#, .NET Core Web API, .NET Framework, React, TypeScript, JavaScript, Microsoft SQL Server, Azure, Docker, NUnit, XUnit, GitHub Copilot.

Key Activities & Achievements:

Frontend Modernization & Autonomy: Successfully migrated a legacy frontend architecture from Angular 1.5 to React 18, significantly boosting application performance while demonstrating full autonomy to own and deliver complex React JS features.

API Migration & Technical Evolution: Spearheaded the successful migration of Sabre endpoints from an older version to a newer one for train search and reservation modules, ensuring zero downtime and modernizing core backend connectivity.

Backend Architecture & Stakeholder Alignment: Architected and developed scalable backend features using ASP.NET Core, collaborating directly with US stakeholders to translate high-level business goals into product requirements and efficient task distributions.

Technical & Quality Assurance: Conducted rigorous code reviews, championed robust refactoring practices, and facilitated cross-team technical alignment throughout the end-to-end pull request (PR) process.

Testing, Documentation & AI Productivity: Ensured high-quality, bug-free deliveries through comprehensive unit and integration testing, authored detailed technical documentation, and optimized engineering workflows by effectively leveraging GitHub Copilot.

Parser Digital — Full-Stack Developer (11/2020 – 11/2022)

Delivered high-impact full-stack solutions for a UK-based healthcare provider, focusing on cloud scalability, secure authentication, and complex financial integrations.

Stack: C#, .NET Core, React, TypeScript, NUnit, XUnit, MySQL, AWS (SQS, CloudSearch, CloudWatch, EC2, Route53), Azure DevOps.

Key Activities & Achievements:

Cloud-Native Architecture & Scalability: Built and optimized a high-performance backend using .NET Core and MySQL across the AWS ecosystem (SQS, CloudSearch, CloudWatch). Outcome: Significantly enhanced system resilience and data retrieval speeds, ensuring high availability for critical healthcare operations.

Financial Integration & Subscription ROI: Designed and implemented a comprehensive billing and subscription system integrated with Chargify. Outcome: Automated complex financial workflows, reducing manual overhead and eliminating revenue leakage.

Security & UX Modernization: Spearheaded the integration of secure authentication protocols via Google Sign-In and streamlined third-party API connectivity (CQC, NumVerify, Fountain). Outcome: Strengthened data privacy compliance in a regulated healthcare environment while improving user onboarding.

Frontend Precision & Autonomy: Developed highly responsive, type-safe interfaces using ReactJS and TypeScript. Outcome: Delivered a seamless, error-free UX tailored for healthcare professionals, operating with full autonomy from concept to deployment.

Learnings & Technical Growth: Mastered the alignment of fintech integrations within highly regulated healthcare standards, while refining cloud-cost optimization strategies and asynchronous message processing via AWS SQS.

SOUTHWORKS – Software Developer (08/2018 – 11/2020)

Functioned as a key contributor for high-profile international clients, specializing in multi-cloud serverless architectures and high-performance streaming applications.

Stack: Node.js, TypeScript, JavaScript, Jest, TDD, AWS (S3, SQS), Azure, NoSQL.

Key Activities & Achievements:

Multi-Cloud Abstraction (The Challenge & Solution): Faced with the challenge of avoiding vendor lock-in for a high-profile client, investigated and implemented a dual-compatible Serverless framework (AWS/Azure). Engineered a custom Node.js middleware pattern to consume storage services (S3 and Blob Storage) completely agnostically.

TDD & Architecture Outcome: Spearheaded this multi-cloud development using strict Test-Driven Development (TDD) with Jest. Outcome: Achieved over 90% code coverage, ensuring seamless cloud switching with zero breaking changes and drastically reducing cross-platform bugs.

High-Performance Streaming Solutions: Developed a custom web platform tailored for Smart TVs and streaming devices using ReactJS and a Node.js Express API. Outcome: Successfully handled high-concurrency CRUD operations against MSSQL, delivering a low-latency, resilient streaming experience for global end-users.

DevOps Optimization & Delivery Speed: Overhauled and optimized CI/CD pipelines within Azure DevOps. Outcome: Slashed deployment times significantly and maximized delivery reliability for international retail and media enterprises.

Enterprise Data Management: Scaled and maintained high-throughput promotion-tracking systems for a global convenience store chain utilizing Node.js and MongoDB, ensuring data consistency during peak traffic hours.

Learnings & Technical Growth: Deepened expertise in cloud-agnostic architecture, mastering the trade-offs of abstracting cloud-native services. Refined the ability to design high-performance, memory-efficient applications constrained by Smart TV hardware limitations.

Hexacta – *Intermediate Software Developer* (05/2017 – 08/2018)

- **Client Portfolio:** Web applications for a French enterprise firm.
- **Stack:** C#, ASP.NET, MVC Pattern, SQL Server, Git.
- **Key Activities & Achievements:**
 - Maintained and optimized core corporate web platforms, ensuring high uptime and fixing critical production bugs.
 - Designed and implemented custom features on top of legacy architectures using ASP.NET (C#).
 - Participated in team code reviews and aligned development tasks with client specifications.

Accenture – *Junior Software Developer* (03/2010 – 03/2016)

- **Client Portfolio:** Multi-project environments across various corporate industries.
- **Stack:** .NET WebForms, Angular, C#, Cobol, CSS, HTML, MVC Pattern, Git.
- **Key Activities & Achievements:**
 - Started professional career delivering software solutions across diverse technical environments and enterprise clients.
 - Contributed to the development and maintenance of legacy web apps using .NET WebForms, C#, and newer frontend features using Angular.
 - Gained foundational experience working within structured Agile methodologies and collaborative version control (Git).

Education

Universidad de Palermo

Bachelor of information technologies – 2021

Universidad Tecnológica Nacional

Senior technician in computer systems - 2015
